# CONFIDENCE in a nutshell

---

## *Chemical* CONTaminants

# CONFIDENCE in a nutshell

---

CONTaminants in *food* and *feed*:  
Inexpensive DETECTION  
for Control of Exposure

# The objectives

---

- Development and validation of new simplified inexpensive detection methods for chemical contaminants from farm to fork
- Improved exposure assessment through monitoring of selected contaminants
- Contribute to validation of predictive hazard behaviour models
- Dissemination and training of new detection methods to all relevant stakeholders, to advance technology exploitation

# CONFIDENCE passport

---

- FP7 Collaborative Project first call “Food, Agriculture & Fisheries, and Biotechnology”
- Duration: May 2008 – December 2012
- 16 partners from 10 countries, representing universities, research institutes, industry and SMEs
- Budget: 7.5 Mio €
- Coordinator: RIKILT - Institute of Food Safety, part of Wageningen UR (NL)

### Visible from space, the giant oil slick spreads towards America's Gulf Coast

By MAL FOREIGN SERVICE  
Last updated at 3:06 PM on 28th April 2010

Comments (18) Add to My Stories

Creeping just 20 miles from America's Gulf Coast, this is the largest environmental disaster in a satellite image taken from space. The spectacle – caught on Nasa's Aqua satellite using its Moderate Resolution Imaging Spectroradiometer instrument – is remarkable as oil slicks are usually only visible from the air using such equipment.

Yet in these images, the spill's mirror-like reflection as the slick spreads across the water is clearly visible.

## NEWS FLASH

Home

### AOAC is reaching out to its Organizational Affiliates (OAs), including technology providers and contract research organizations, in an effort to establish standard method performance requirements (SMRs) for determining the presence of chemical compounds in seafood resulting from the Gulf oil spill.

AOAC members from state agricultural laboratories are likely to be affected by the oil spill, which started with an oil rig explosion on April 20, 2010, off the coast of Louisiana, and have expressed growing concern that a fully validated analytical method for polycyclic aromatic hydrocarbons (PAHs) and volatile organic compounds (VOCs) in seafood may be required soon. Methods are available from AOAC [Means, J.C. (1998) "Compound-Specific Gas Chromatographic/Mass Spectrometric Analysis of Alkylated and Parent Polycyclic Aromatic Hydrocarbons in Waters, Sediments, and Aquatic Organisms," J. AOAC Int. 81, 657-672] and the National Institute of Standards and Technology (NIST) [NIST 1515]. The National Oceanic and Atmospheric Administration (NOAA) is currently consuming for the extensive testing that may be required. AOAC is currently holding a stakeholder meeting to establish consensus on a standard method. In other AOAC news relating to the Gulf oil spill (USA) features a keynote presentation on "Reopening the Gulf of Mexico" by Tracy Collier, Oceans and Human Health, NOAA Fisheries.

## AOAC INTERNATIONAL Collaborative Study

### Final Protocol

## NEWS FLASH

### PAH Update: Candidate Method to Enter Collaborative Study

Due to the urgent need for rugged, reliable methods to determine polycyclic aromatic hydrocarbon (PAH) compounds in seafood from the Gulf, AOAC expedited a process that, ultimately, led to a candidate method ready for AOAC validation. AOAC facilitated a stakeholder panel and working group meetings; established a fitness-for-purpose statement; issued calls for methods and collaborators; evaluated available methodology purported to meet fitness for purpose; and selected the best candidate method for further evaluation and validation—all within 3 months. Further, AOAC has developed, and is currently finalizing, a validation study protocol, and the method is about to enter into collaborative study. AOAC validation of a method to detect PAHs in seafood is expected to take less than 6 months from start to finish.

In choosing a candidate method, AOAC reviewed approximately 30 methods for the detection of PAHs. Consequently, the PAH Working Group on Quantitative Methods, chaired by **Gina Ylitalo**, NOAA NWSFC, recommended a method by **Lucie Drabova et al.** at the Institute of Chemical Technology in Prague, Czech Republic as the most promising candidate method for further evaluation and, ultimately, validation as an AOAC-approved method.

In general, the method (Rapid Method for Simultaneous Determination of PAHs, Polychlorinated Biphenyls, and Polybrominated Diphenyl Ethers in Fish and Seafood Using GC-TOF/MS) is easy to perform, uses common laboratory equipment, and meets fitness-for-purpose and AOAC single-laboratory validation (SLV) requirements. The method uses a gas chromatography system coupled to a mass spectrometer detector that allows identification and quantification of all target PAHs.

- Anthracene/phenanthrene

### Hydrocarbons (PAHs) in Seafood using Gas Chromatography-Mass Spectrometry (GC-MS/MS): A Collaborative Study

Katerina Maslovska  
Covance Laboratories Inc.

Wendy R. Sorenson  
Covance Laboratories Inc.

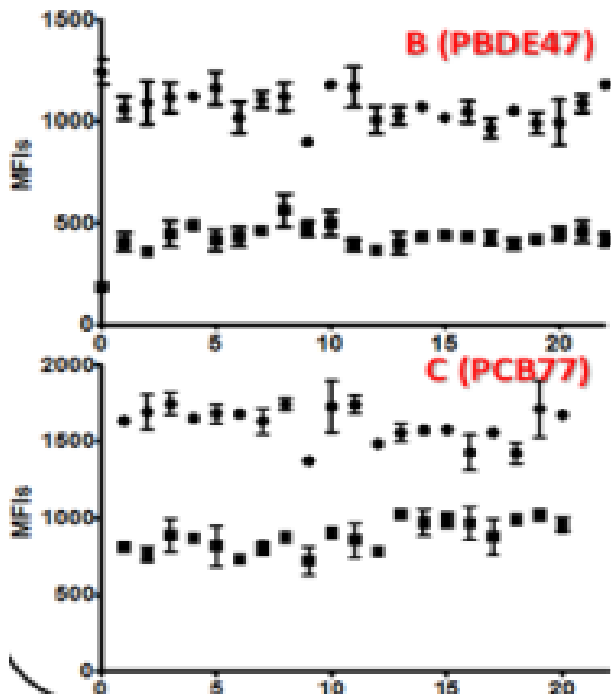

Jana Hajslova  
Institute of Chemical Technology, Prague

#### Introduction

Within a European integrated project CONFIDENCE (Contaminants in food and feed: Inexpensive detection for control of exposure), Jana Hajslova's group at the Institute of Chemical Technology (ICT) in Prague, Czech Republic developed a method for the determination of polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs) and polybrominated diphenyl ethers (PBDEs) in fish and seafood using gas chromatography coupled with time-of-flight mass spectrometry (GC-TOFMS). This method was selected for further study as an AOAC collaborative study by the AOAC Stakeholders Panel on Seafood Contaminants (SPSC), which was formed as a response to the seafood contamination resulting from the recent oil spill in the Gulf of Mexico. The analytes for this collaborative study have been narrowed down to include only PAHs and some of the relevant PAH alkyl homologues. Having a rapid method is essential for quick determination of contaminants in food, especially after environmental disasters. The nineteen contaminants found in Table 1 will be studied in this collaborative study.

# Achievement 3: screening POPs in fish

- Multiple persistent pollutants screened simultaneously
- Demonstrated for lean fish

**MAGPIX**

- High throughput 96 wells assay
- Imaging bead based assay

# Achievement 4: monitoring survey

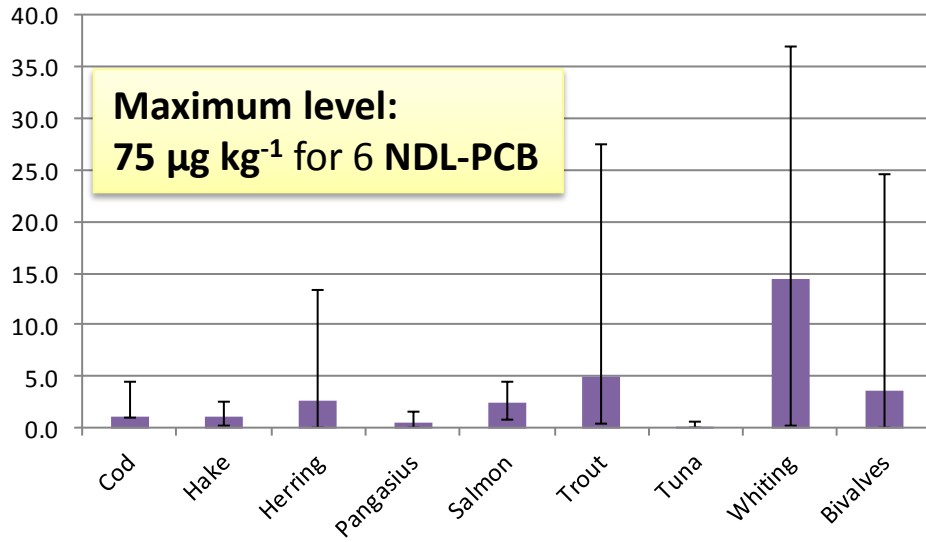

- Analysis of batch of ca. 150 samples, based on EU-MSFD-descriptor 9
- Co-occurrence of POPs & PUFA, PFAS, heavy metals, for risk-benefit discussions
- Data to be provided to **EFSA**

Species	Region	Lead for collection of samples
Herring	Baltic sea	DTU
	North sea	RIKILT
	Atlantic ocean	DTU
Cod/whiting/hake	North sea	ICT
	Atlantic ocean	ICT
	Mediterranean sea	CSIC
Trout and salmon	Czech Republic	ICT
	Spain	CSIC
	Scandinavia	DTU
Bivalves	Scandinavia	DTU
	The Netherlands	RIKILT
	Mediterranean Sea	CSIC
Tuna	Canned, in water, preferably from Europe	All
Pangasius	Mostly Vietnam	All

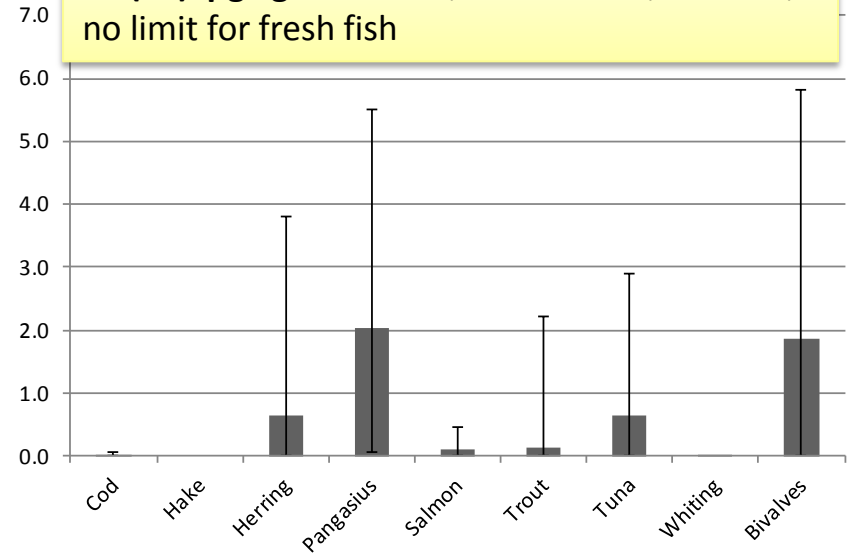

# Achievement 4: monitoring survey

**Maximum level:  
30 (35) µg kg<sup>-1</sup> for PAH4, smoked fish, bivalves,  
no limit for fresh fish**

- Occurrence / contamination pattern differs among species / localities / contaminant groups
- Legislation limits not exceeded

Commission Regulation (EU) No 1259/2011 and 853/2011

# Achievement 4: monitoring survey

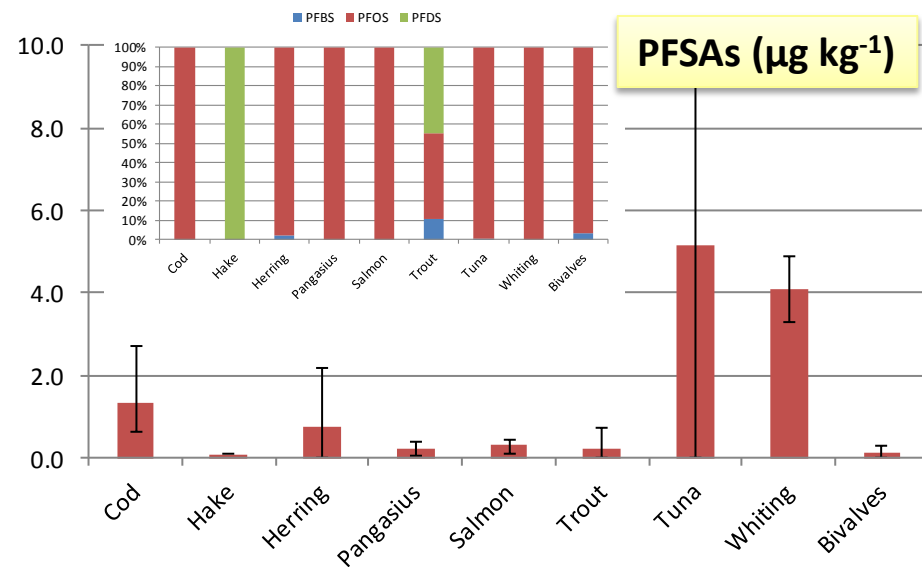

**PBDEs ( $\mu\text{g kg}^{-1}$ )**

**PFCAs ( $\mu\text{g kg}^{-1}$ )**

**PFASs ( $\mu\text{g kg}^{-1}$ )**

➤ Occurrence / contamination pattern differs among species / localities / contaminant groups

# Achievement 5: DART-MS lipids profiling

## ANALYSIS OF FISH LIPIDS COMPOSITION

Classic methods:

Isolation of fats

Saponification

Derivatisation

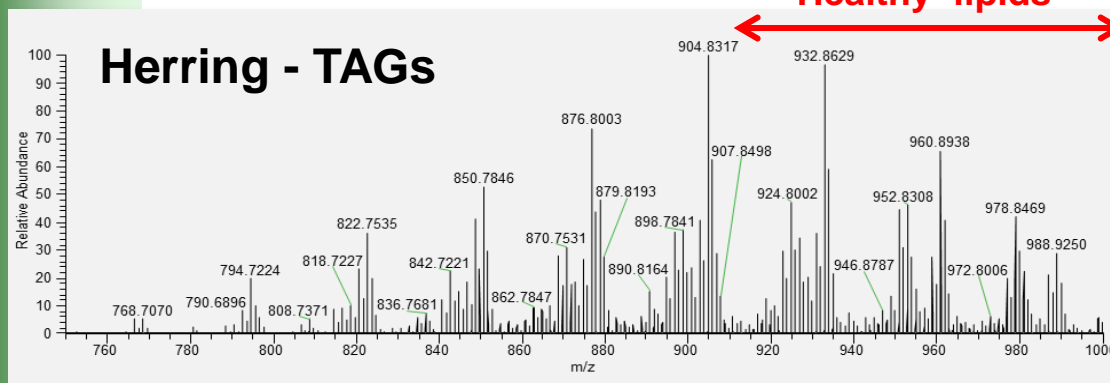

GC-FID

New method:

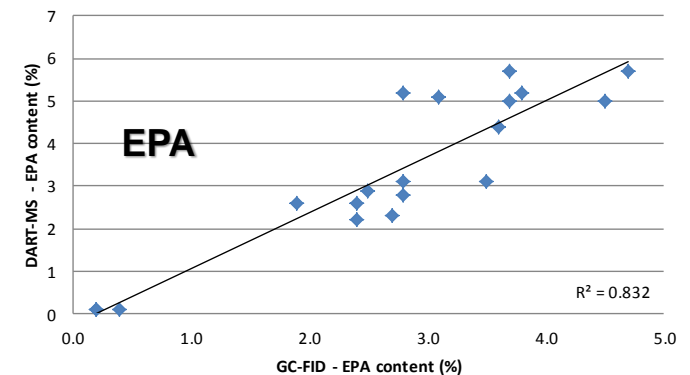

Isolation of fats

DART-MS

### DART(+)-MS profiles

### Correlation between classic and new method ▼

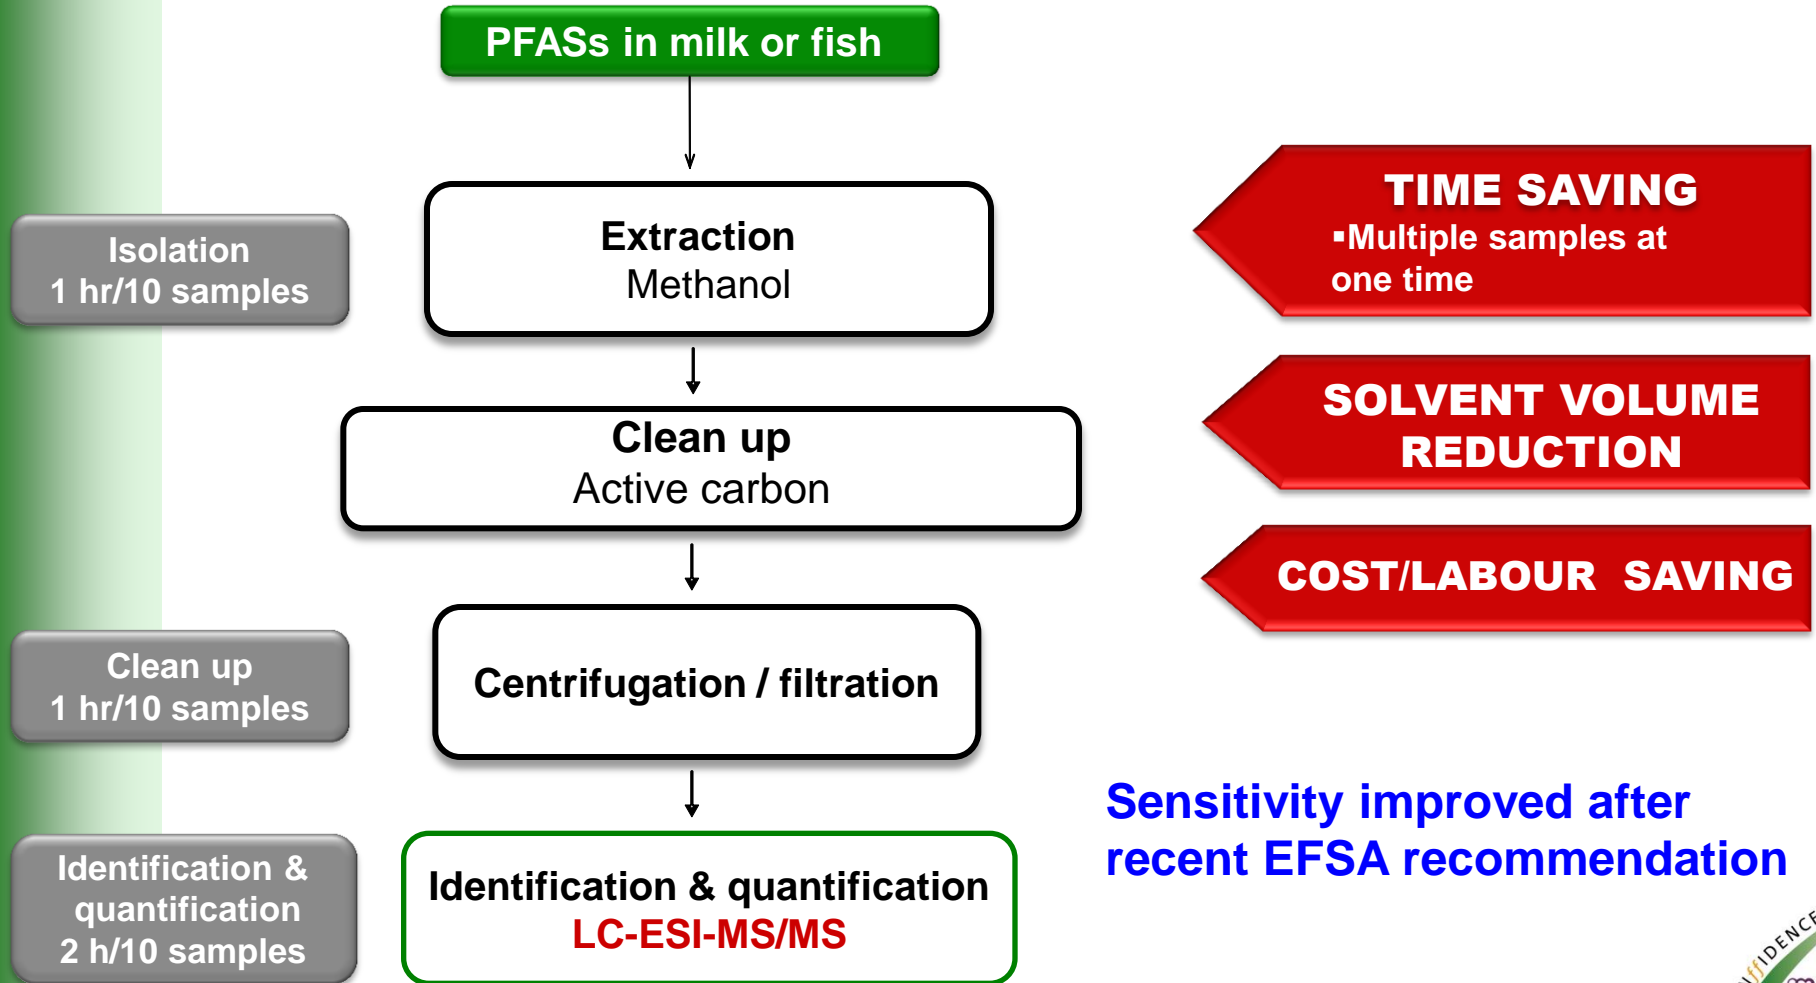

# Work package WP1b

Perfluorinated compounds

CONffIDENCE Final Stakeholder Workshop  
Brussels, 18 December 2012

# Simplified method for perfluorinated alkyl compounds

Sensitivity improved after recent EFSA recommendation

# Achievement: full collaborative study

- Simplified method is robust and was transferred to other laboratories (n = 8)
- Works well for most PFASs investigated

Matrix	Analyte	HORRAT	HORRAT evaluation
<i>Fish muscle</i>	PFOS	0.97	✓ $0.5 < \text{HORRAT} \leq 1.5$
	FOSA	0.69	✓ $0.5 < \text{HORRAT} \leq 1.5$
<i>Fish feed</i>	PFOS	0.84	✓ $0.5 < \text{HORRAT} \leq 1.5$
	FOSA	0.61	✓ $0.5 < \text{HORRAT} \leq 1.5$
<i>Milk samples</i>	PFOS	1.42	✓ $0.5 < \text{HORRAT} \leq 1.5$
	PFOA	0.80	✓ $0.5 < \text{HORRAT} \leq 1.5$
	FOSA	2.2	✗ $\text{HORRAT} > 2$

# Work package 1c

development of fast methods for **PESTICIDES**  
not amenable to multi-residue methods

CONffIDENCE Final Stakeholder Workshop  
Brussels, 18 December 2012

# Achievement 1

## Dithiocarbamates (DTCs) in fruits/vegetables

### ➤ Issue:

- Current practice: measured as group after conversion into  $\text{CS}_2$
- EU monitoring: most frequently detected 'SRM' pesticide
- EU-MRL for sum DTCs as  $\text{CS}_2$  but separate MRLs for thiram, ziram and propineb [methods laborious or not available]

### ➤ CONFIDENCE solution:

Direct detection by ambient MS (feasibility)

DART ion source

mass spectrometer

1. surface extraction of fruit with solvent
2. dip glass rod in solvent

3. place rod in front of MS detection device

# Achievement 1 (continued)

- Straightforward extraction of >10 samples in 15 min
- Detection ~20 seconds/extract

- Sufficiently sensitive and selective at  $\leq$ MRL level
- Impact:
  - enables rapid detection/identification of 2 out of 3 targeted DTCs
  - can be used as rapid dedicated method or to supplement existing CS<sub>2</sub>-based method to further investigate positive samples

# Achievement 2

## Paraquat & diquat in potatoes and cereals

### ➤ Issue:

- widely used as herbicide/desiccant (paraquat now banned in EU)
- EU-MRL: diquat 0.05\*-10 mg/kg, paraquat 0.02\* mg/kg
- extraction/clean up very laborious
- virtually no monitoring/enforcement data available

### ➤ CONffIDENCE solutions:

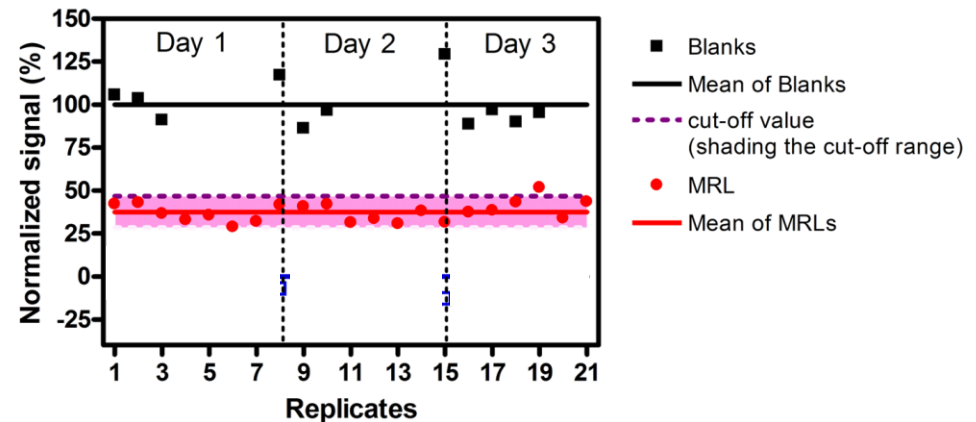

- Development of efficient extraction procedure compatible with instrumental and sensor-based detection methods
- Improved LC-MS/MS method adopted by EURL SRM-pesticides and in use for monitoring
- Development of immunoassay-based sensor

# Achievement 2 (continued)

- Electrochemical immunosensor:
  - 2-step process: incubation/washing (~15 min, 10-20 samples parallel); electrochemical measurement 4 min/sample
  - Detection of paraquat, multiplexing possible (demonstrated in multi-class application: detection of mycotoxin DON)
  - Cost of sensor ~3,000 euro

Current data of PQ detection running during 3 days.

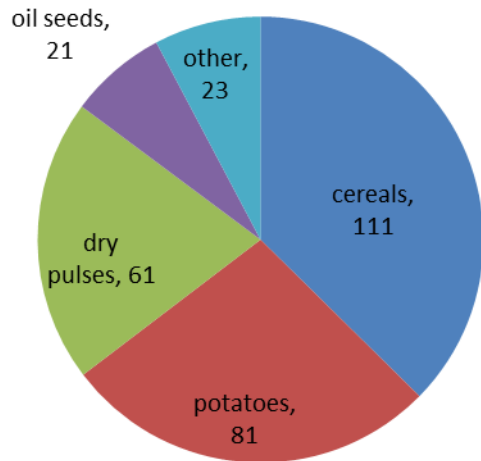

- Impact:
  - Novel type of sensor for screening of paraquat, suited for application in basic lab environment
  - Multiplex/multi-class capability demonstrated

# Achievement 3: Survey

- Data from survey paraquat & diquat in food and feed:

July 2010-Nov 2012: ~290 samples**			EU-MRL	min	max	median
analyte	product	# positives	mg/kg			
diquat	potato	6	0.05*	0.006	0.021	0.011
	dry pulses (lentils)	6	0.2*	0.021	0.107	0.054
paraquat	not detected	0	0.02*	-	-	-

\*\*Confidence Survey + additional monitoring by EURL

- Impact: Survey data will be available for EFSA, DG SANCO and EURL Pesticides

# Questions ?

# Work packages 2a & 2b cluster

Veterinary pharmaceuticals (Coccidiostats & Antibiotics)

CONFIDENCE Final Stakeholder Workshop  
Brussels. 18 December 2012

# Work package 2a

WP title: Coccidiostats

CONffIDENCE Final Stakeholder Workshop  
Brussels, 18 December 2012

# WP2a - Coccidiostats

➤ New relatively **fast** and **inexpensive multiplex** method for the screening of:

- Residues of coccidiostats in eggs

Commission Regulation (EU) N° 610/2012 amending Regulation (EC) No 124/2009 of 10 February 2009 setting maximum levels for the presence of coccidiostats or histomonostats in food resulting from the unavoidable carry-over of these substances in non-target feed

- Coccidiostats at cross-contamination levels in non-target feed

Commission Regulation (EU) N° 574/2011 of 16 June 2011 amending Annex I to Directive 2002/32/EC of the European Parliament and of the Council as regards maximum levels for nitrite, melamine, Ambrosia spp. and carry-over of certain coccidiostats and histomonostats and consolidating Annexes I and II thereto

➤ Method developed and validated in-house and through a small-scale collaborative trial

➤ Prototype developed

➤ Target analytes: lasalocid A, monensin, salinomycin, narasin, (diclazuril) and nicarbazin

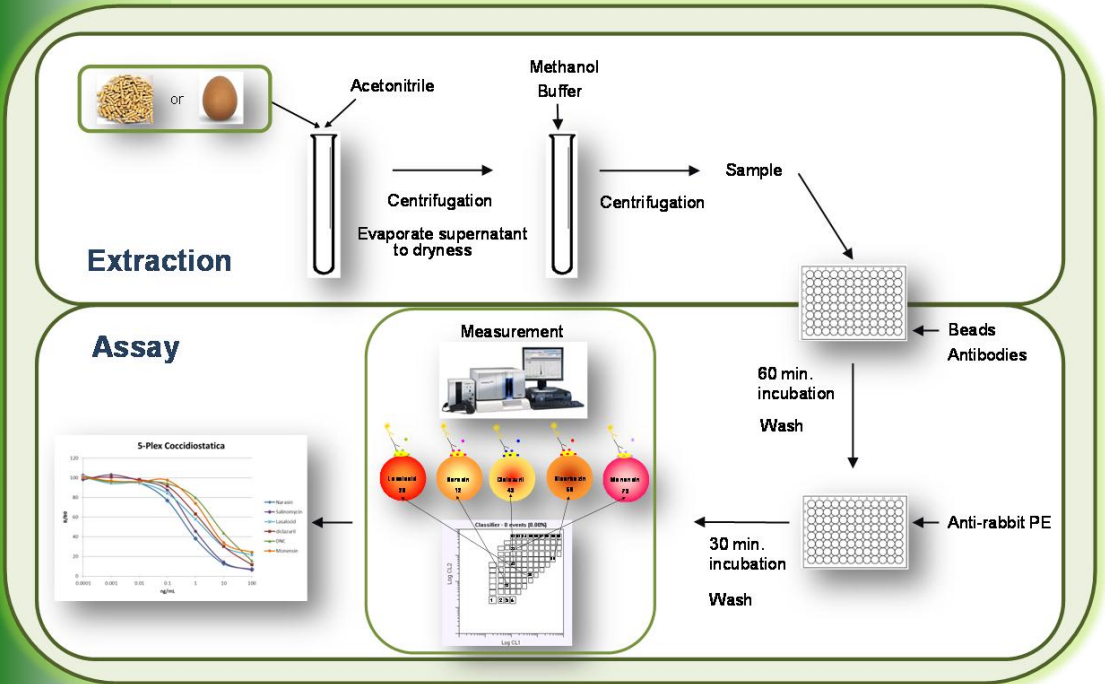

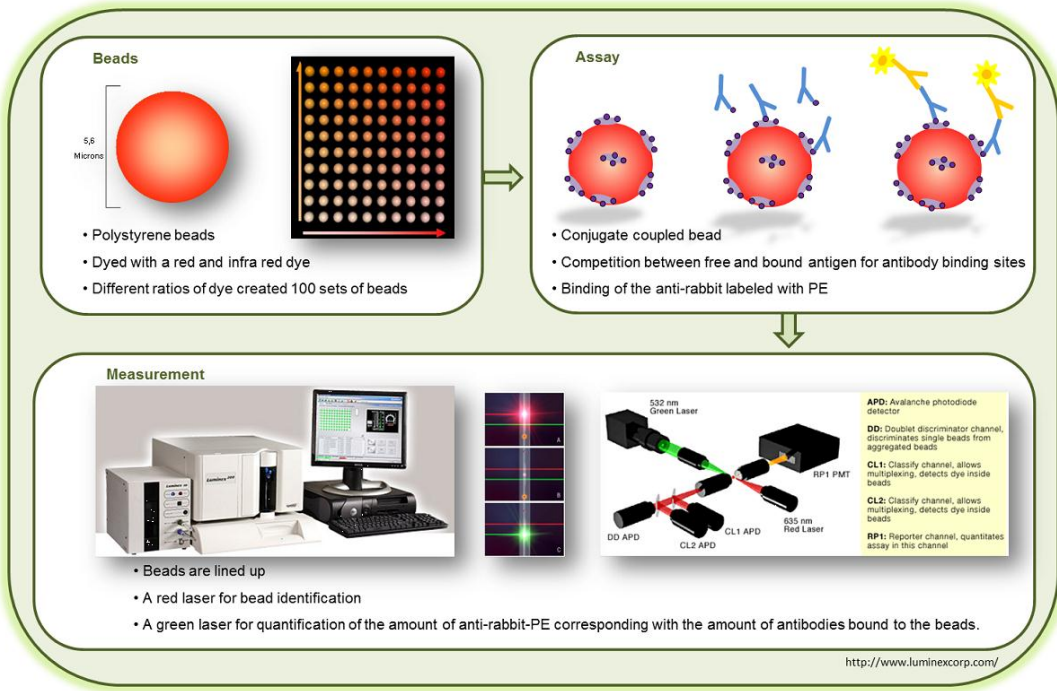

➤ Target matrices: Laying hens feed and eggs

# The Technology

## Flow cytometry based multiplex immunoassay

# The Method

Generic extraction  
40 samples (240 analytes) per day  
in routine

# Ring trial

- 9 egg materials
- 16 feed materials
- Analysis in blind quadruplicate;
- each replicate analysed in duplicate
- 5 participating laboratories

# Ring trial - Overview

	Eggs	Feed
Narasin/Salinomycin	2.89	0.52
Lasalocid	0.17	2.75
DNC	0.35	10.47
Diclazuril	9.14	93.40
Monensin	2.42	1.65

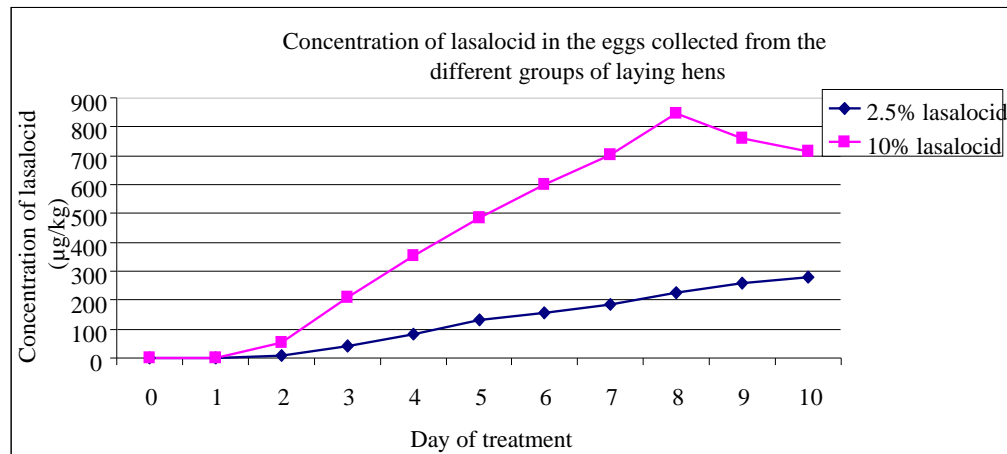

**Rate of false positives in the blank in %**

Established at 95% confidence level (maximum rate of false negatives is 5%)

# WP2a – Carry-over study

- Lasalocid: from laying hens feed to eggs
  - Four groups – 30 to 55 weeks:
    - Control,
    - 10% of the authorised additive level,
    - 2.5% of the authorised additive level
  - Samples tested by:
    - FCIA and
    - LC-MS/MS: reference method
- ⇒ results in accordance

# WP2a – Carry-over study - Conclusions

- **Linear relationship** between lasalocid contaminated feed and lasalocid residues in eggs **verified**

$$\text{concentration in eggs } (\mu\text{g kg}^{-1}) = 63.6 \times \text{concentration in feed } (\text{mg kg}^{-1})$$

$r = 0.999$

- **Rapid** and **reliable** estimation with **FCIA** (as for LC-MS/MS)

# Work package 2b

WP title: Antibiotics

CONffIDENCE Final Stakeholder Workshop  
Brussels, 18 December 2012

# WP2b - Antibiotics - achievements

- Development, validation and impact demonstration of dipsticks (DS) to detect **antibiotics** in a range of matrices

- Multiplex DS

- Sulfonamides, fluoroquinolones, tylosin and chloramphenicol in honey

- Single-component DS

- Tetracyclines (TCs) in feeds, urine and processed meat

# Dipstick principle

 CARRIER protein  
 CONTAMINANT

 « BINDER » molecule :  
 - Antibody  
 - Aptamer  
 - Receptor

 1st Antibody anti-BINDER GOLD conjugate  
 2nd Antibody anti-BINDER GOLD conjugate

# Multisensor – bee4sensor for honey

- **Multisensor**: Unique **multiplex**, antibody based lateral flow dipstick **assay**, for the screening of **sulphonamides**, **fluoroquinolones**, **tylosin-A**, and **chloramphenicol** in **honey**
- Laboratory method
  - Single laboratory validation
  - Inter-lab validation with 7 European laboratories
- Field-test method
  - Proof of principle
  - Global field trial with 16 participants from across governmental, industrial organisations and academia
- Rapid test for industry and enforcement authorities

# Comparison of detection capability

Antimicrobial	LC-MS/MS [ $\mu\text{g kg}^{-1}$ ]	Multi-lab [ $\mu\text{g kg}^{-1}$ ]	Multi-field [ $\mu\text{g kg}^{-1}$ ]
Sulfathiazole	2.5	25*	50
Tylosin	2	10	25
Ciprofloxacin	10	25#	25
Chloramphenicol	0.15	5	100
<b>Time required</b>	<b>3x2 Days</b>	<b>Less than 4h</b>	<b>less than 1h</b>

\*Applicable to 11 other sulfonamides

#Applicable to 5 other fluoroquinolones and 3 at 100  $\mu\text{g/kg}$

# Tetrasensor for feed, urine and meat

- **Tetrasensor:** Extension of the existing concept of a receptor based lateral flow dipstick assay for **tetracyclines** in milk, honey, raw animal tissues to **feed, urine and (cooked) meat**

- Following the assay optimisation a single laboratory validation (CD 2002/657/EC) was performed
- This rapid, sensitive and easy to use test is capable of the detection of tetracycline compounds in a range of matrices at the required detection limit of  $100 \mu\text{g kg}^{-1}$  and lower
- 30 to 50 samples can be analysed in a day (4 to 7 samples per h)

# Conclusions and Summary

---

## **Coccidiostats in egg and feed:**

- A new multiplex method has been validated via a inter-laboratory ring trial. Good data obtained with the exception of a high false positive rate for diclazuril in feed.
- Relationship between lasalocid contaminated feed and lasalocid residues in eggs determined

## **Antibiotics in honey:**

- Successful development and validation of a rapid method for use in the laboratory or the field. Commercialisation underway.

## **Tetracyclines in meat and urine:**

- Successful development and validation of a rapid method at the required detection limit of  $100 \mu\text{g kg}^{-1}$

# Questions ?

# Work package 3

Heavy metals

CONFIDENCE Final Stakeholder Workshop  
Brussels, 18 December 2012

# WP3 – setting the scene

➤ Current situation in EU legislation:

## Foodstuffs

MLs for Pb, Cd, Hg and Sn  
EU directive 2006/1881/EC (and amendments)

## Animal feedingstuffs

MLs for As, Pb, Cd and Hg  
EU directive 2002/32/EC (and amendments)

Only maximum levels for  
total concentration of the metals

**CONFIDENCE - progress beyond state-of-the-art**

## Arsenic

- inorganic As (iAs) is the toxic form of As
- Lack of specific data on iAs (EFSA, 2009 and JECFA, 2015)
- Lack of validated, standardised methods (EFSA, JECFA)

**Focus on inorganic arsenic**

## Mercury

- Methylmercury is more toxic than inorganic
- Call for methods for specific MeHg determination (EFSA)

**Focus on methylmercury**

## Seafood/marine feed

- Seafood is the predominant source of As and Hg in the European diet
- Focus on marine feed and food sample types

# SPE-HG-AAS – a novel speciation alternative...

μ-wave extraction

Separation by SPE

Detection by HG-AAS

Inexpensive detection system

**Concept:** Sequential elution for selective separation of **inorg As** from **organoAs** species by SPE

- Survey on inorganic arsenic in seafood (N=148)
  - Fish samples (N=121) <math><0.01 - 0.04 \text{ mg/kg}</math>
  - Bivalves (N=27) <math><0.01 - 0.07 \text{ mg/kg}</math>
- Input to EFSA evaluation on inorganic arsenic exposure
- Important info for seafood producers and authorities

# Inorganic arsenic in rice – a hot food safety topic

- Tailoring of SPE HG-AAS method for rice and rice products
- Simplified extraction in waterbath for increased sample throughput (> 50 samples extracted in 1 hour)

Survey on 36 samples

Dataset provides input to:  
EFSA (exposure estimation)  
EU commission (legislation?)  
CODEX (legislation?)

Future EU max level (0.2-0.3 mg/kg)?

Chinese max level (0.15 mg/kg)

# Speciation analysis of mercury by HPLC-ICPMS

High capacity!

Ultra-sonification

HPLC

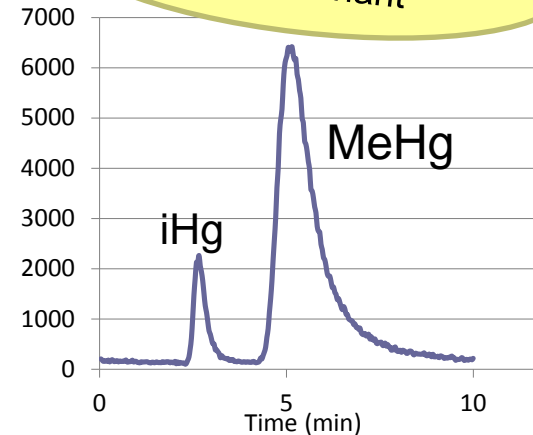

Column

ICPMS

MeHg is a priority contaminant

Chromatogram of fish muscle sample

- Simple extraction by ultrasonification for increased sample throughput (> 50 samples extracted in approx 1 h)
- Validated for marine food and feed
- Applied on a range of seafood and marine feed samples
- Dataset is a valuable input for ongoing risk assessment on MeHg
- Method useful for both food/feed control and industry

# Survey data – MeHg in seafood

Methyl mercury in fish and fish feed

Biotoxins: alkaloids, marine biotoxins,  
mycotoxins

CONFIDENCE Final Stakeholder Workshop  
Brussels, 18 December 2012

# Work package 4a

WP title: Alkaloids

CONFIDENCE Final Stakeholder Workshop  
Brussels, 18 December 2012

# Achievement 1: Dipsticks

- Tropane alkaloids (TAs) in feed and ergot alkaloids (EAs) in cereals and feed (Unisensor)
- Fast extraction; low price (ca. 5-7 €); fast result (30 min)
- Over 60 samples / day / analyst

4 g of test portion

+  $\frac{40 \text{ ml}}{\text{MeOH/H}_2\text{O/HCOOH}}$   
(60:40:0.4)

↓ Vortex 2 min

Dilute 5 times in buffer (EAs)

or

Dilute 10 times in buffer (TAs)

Run the dipstick test

# Example: Tropane alkaloids dipstick

## ➤ In-house validated (RIKILT)

- Target level: 800 µg/kg hyoscyamine / scopolamine
- 21 Blank feed samples

## ➤ Inter-laboratory validated

- 7 Labs participating
- Successful results

## ➤ Application

- Design allows field testing (e.g. HACCP plan Nutreco)
- Screening: over 95% of feed samples are blank

# Achievement 2: Multiplex ELISA

- Pyrrolizidine alkaloids (PAs) occur in e.g. weeds, herbs, honey
- ELISA screening of major PAs in honey and feed (QUB)
  - In parallel screening for lycopsamine, heliotrine and senecionine
  - Cross reactivities to structural analogues
  - Results in 2 h; over 50 samples / day / analyst

'Senecionine' Ab 'Lycopsamine' Ab 'Heliotrine' Ab

- ● ● Negative controls 0 ppb
- Senecionine positive control 50 ppb
- Lycopsamine positive control 50 ppb
- Heliotrine positive control 50 ppb

# Example: PAs in honey

## ➤ In-house validated (QUB)

- Target level: 50 µg/kg senecionine, lycopsamine, heliotrine
- 4 Blank honeys

## ➤ Method verification

- 3 laboratories, on-going

## ➤ Applications

- On (production) site testing of raw honeys
- Ca. 10% of honeys will test positive

# Achievement 3: NIR method

- NIR hyperspectral imaging method to detect and quantify ergot bodies in cereals at levels below regulatory limits (CRA-W)
- Full conveyer belt system with belt speed of 100 mm/s allows analysis of up to 100 kg grain/hour

NIR line scan imaging system

Conveyor belt

# Test system in operation at Nutreco (2011)

# Further developments

- Multicontaminants detection: ergot, Datura, ...

2 lines of rapeseed, Datura seeds, ergot sclerotia and wheat kernels, respectively

# Work package 4b

WP title: Marine Biotoxins

CONffIDENCE Final Stakeholder Workshop  
Brussels, 18 December 2012

# Focus

Focus of the research has been on a range of regulated and emerging marine biotoxins

These are naturally occurring chemicals produced by algae that accumulate in shellfish

# The Marine Toxin Targets

**Saxitoxin and analogues (PSP)**

**Spirolides**

**Domoic acid (ASP)**

**Palytoxin**

**Okadaic acid and analogues (DSP)**

# Major Achievements

Confidence research (and researchers) contributes to two EFSA opinions on emerging marine toxins

EFSA Journal 2009; 7(12):1393

## SCIENTIFIC OPINION

**Scientific Opinion on marine biotoxins in shellfish – Palytoxin group<sup>1</sup>**

**EFSA Panel on Contaminants in the Food Chain (CONTAM)<sup>2,3</sup>**

European Food Safety Authority (EFSA), Parma, Italy

EFSA Journal 2010; 8(6):1628

## SCIENTIFIC OPINION

**Scientific Opinion on marine biotoxins in shellfish – Cyclic imines (spirolides, gymnodimines, pinnatoxins and pteriatoxins)<sup>1</sup>**

**EFSA Panel on Contaminants in the Food Chain (CONTAM)<sup>2,3</sup>**

European Food Safety Authority (EFSA), Parma, Italy

This scientific opinion replaces the earlier version published on 7 June 2010.<sup>4</sup>

# Major Achievements

The monitoring for marine biotoxins is a global issue.

Performing fast, low cost testing not requiring animals is an important issue

World's first multiplex biosensor assays for multiple shellfish toxins developed and validated

Biosensors and Bioelectronics

Volume 26, Issue 6, 15 February 2011, Pages 3029–3036

Use of a novel micro-fluidic device to create arrays for multiplex analysis of large and small molecular weight compounds by surface plasmon resonance

# Hot of the press

World's first low cost, commercially available, multi-toxin detection assay under development (*planer waveguide based detection system on a customised biosensor device*)

New biosensor SME to be established to exploit Confidence marine toxin research

Chip based technologies will be central to a new generation of food safety testing

# Work package 4c

WP title: Mycotoxins

CONffIDENCE Final Stakeholder Workshop  
Brussels, 18 December 2012

# WP4c: mycotoxins

Commodity dedicated **multiplex dipstick tests** for the determination of major *Fusarium* toxins

WHEAT

OAT

WHEAT BASED BREAKFAST CEREALS

Target toxins: **DON, ZEA, T-2** and **HT-2** toxins

MAIZE

MAIZE FEED

MAIZE BASED BREAKFAST CEREALS

Target toxins: **DON, ZEA, FB<sub>1</sub>, FB<sub>2</sub>, T-2** and **HT-2** toxins

**Target levels: EU maximum permitted levels**

# The assay procedure

Methanol/water extraction

Dilution with buffer

Incubation at 40°C, 10 min  
Migration, 10 min

Reading

CTRL  
FB1+FB2  
DON  
T2+HT2  
ZEA

**NEG:** Test Lines **darker** than CTRL line

**POS:** test Lines **lighter** than CTRL line

**Total analysis time: 30 min for 6 mycotoxins**

# In house validation: main results

---

- Evaluation of error contributions from various factors (day, matrices....) proved the **ruggedness of the assay.**
- The test can differentiate blank samples from samples contaminated at target levels with **false positive rates less than 6%.**
- When tested with a set of naturally contaminated samples the assay showed **good agreement with LC-MS/MS** confirmatory method and **NO false negative** results.

We checked **fitness for purpose** by considering the **cost situation** and expected **frequency distribution** of target analytes

Estimating total analytical costs for two options:

- Analysing all samples with LC/MS
- Analysing all samples with the screening test and all false positive additionally with LC/MS

LC/MS:  
200 Euro/sample  
Screening test:  
20 Euro/sample

The **test** presented here is considered **fit for purpose**

# The commercial kit

## 4 myco sensor

Multiple strip test detecting Deoxynivalenol, Zearalenone, Fumonisin FB1/FB2 and T-2/HT-2 mycotoxins in one single test

*unisensor* 

*www.unisensor.be*

**MULTIPLEX:** 6 mycotoxin analysed in 1 test

**FAST:** up to 8 samples in 1 hour (including sample preparation)

**SENSITIVE:** mycotoxin detection at levels close to EU regulatory limits

**USER FRIENDLY:** 5 min for sample preparation, easily performed on site

# Impact

- Quality control of incoming raw materials in food companies and feed mills

- Quality control of raw materials at the farm (taking into account that the importance of rapid test will shift from feed mill towards farm)

# In progress....

Satisfactory results from in house validation  
Kit commercially available (standardized large scale production)

Follow up:

## Full-scale interlaboratory validation

- **Number of participants:** 13 Laboratories
- **Matrix/mycotoxin combinations:**

Wheat: DON, ZEA, T-2, HT-2

Maize: DON, ZEA, T-2, HT-2, FB<sub>1</sub>, FB<sub>2</sub>

- **Expected outputs:**

Precision profile under reproducibility conditions

Incidence of false positives

*small scale  
interlaboratory validation  
requested by the contract*

*results expected by December 31, 2012*

---

## CONFIDENCE: Contaminants in food and feed: Inexpensive detection for control of exposure

### Improving Food Safety in Europe: developing rapid tests for chemical contaminants in a new European research project

The mid-term review (MTR) meeting was held on Monday 7th and Tuesday 8th of February 2011 in Brussels. The purpose of this meeting was to assess the results (deliverable reports) and progress at half time of the four year project period.

The reviewing was done by two external reviewers and the scientific officer. During this 2-day meeting, all CONFIDENCE Work package leaders (or their representatives) and the coordination team presented the activities and achievements for the period May 2008 – December 2010 in the RTD-, dissemination- and management Work packages.

There was ample time for discussion, questions and recommendations by the reviewers. Overall, the reviewers were and progress of the project so far. Their conclusions were summarised in a report. The s their recommendations in the coming period.

antibiotics: Field evaluation planned. More information

# Public website

1 May 2008 - 30 Nov 2012

- 1370 pages viewed by month
- 430 visits by month
- 10% by CONFIDENCE partners

# 8 e-Newsletters

116 stakeholders registered on-line

- 36 food/feed companies
- 64 Research organisations
- 16 Instrument or kit manufacturers

More on <http://www.confidence.eu/arcn>

Dear stakeholder,

The CONFIDENCE project team is proud to present the 8th edition of the CONFIDENCE e-newsletter. In this newsletter you will find recent developments in the CONFIDENCE project and related information in the area of contaminants in food and feed.

If you want to subscribe to CONFIDENCE News, please fill in the registration form on <http://www.confidence.eu/Stakeholders/registration.php>

Best regards,  
Jacob de Jong, RIKILT - Institute of Food Safety

CONFIDENCE coordinator  
[dissemination\\_officer@confidence.eu](mailto:dissemination_officer@confidence.eu)

## In the spotlight

### CONFIDENCE: Next end users workshops

In order to specifically target end users, workshops will be organized by each cluster: organic pollutants, veterinary pharmaceuticals, heavy metals, biotoxins. These workshops aim to present the achievements of the CONFIDENCE partnership for each cluster of workpackages to the stakeholders, allowing them to become familiar with the newly developed methods and their applicability in the food and feed chain. More information on those 4 events can be found in the upcoming events section of this newsletter.

**4th Annual meeting of the CONFIDENCE project in March 2012**

The fourth annual meeting, hosted by Unisensor/CER/CRA-W, was held on 21st and 22nd of March 2012 in Belgium.

The Plenary meeting of the Consortium was held on Wednesday 21st of March in Liège and was co-chaired by the Coordinator of the project, Dr. Jacob de Jong and the assistant coordinator Dr. Stefan van Leeuwen. It was attended by 31 researchers from the CONFIDENCE partners, 3 members of the Advisory Board

# 3 Open Days

- 1<sup>st</sup> Open Day: RME  
Noordwijkerhout (NL), 27 January 2010

- 2<sup>nd</sup> Open Day: World aquaculture  
Natal (Brazil), 9 June 2011

- 3<sup>rd</sup> Open Day: RAFA  
Prague (CZ), 3 November 2011

 260 Participants  
14 Oral presentations, 55 posters, 12 demonstrations

More on [http://www.confidence.eu/Project\\_output/openday.php](http://www.confidence.eu/Project_output/openday.php)

# 4 Stakeholders workshops

- Cluster 1: LC/MS/MS workshop  
Barcelona (SP), 3 July 2012

- Cluster 2: EURO Residue VII  
Egmond aan Zee (NL), 16 May 2012

- Cluster 3: EURL Heavy metals  
Brussels (BE), 20 Sept 2012

- Cluster 4: WMFmeets IUPAC  
Rotterdam (NL), 9 Nov 2012

300 Participants

16 Oral presentations, 10 posters, 4 Demo

# International PhD course:

## Advanced Food analysis

### ➤ Date, location

15-19 November 2010

Wageningen (NL)

Organised with VLAG school

### ➤ Participants:

60 PhD students

6 PostDoc researchers  
from 12 countries

### ➤ Content:

27 lectures on Food analysis by CONFIDENCE members and other experts

More on [http://www.confidence.eu/Project\\_output/course.php](http://www.confidence.eu/Project_output/course.php)

# BSc education modules

## ➤ Date, location

4 and 11 October 2011

Dronten (NL)

Organised with CAH Dronten University

## ➤ Participants:

26 International students from 11 countries

49 Dutch students

## ➤ Content:

2 Days course on theoretical and technical issues on mycotoxins and plant toxins in food

More on [http://www.confidence.eu/Project\\_output/course2.php](http://www.confidence.eu/Project_output/course2.php)

# 108 Lectures and 110 posters

## International conferences

# 24 Publications

## ➤ Peer reviewed publications

24 published

35 planned

A screenshot of the CONFIDENCE Intranet Publications page. The page has a header with 'Home Help' and 'CONFIDENCE Intranet Publications'. Below the header is a search bar. The main content area is divided into two columns. The left column contains a 'Select a View' menu with options: 'All Items', 'Status', 'Full reference' (selected), 'Dissemination activities PMB', 'By Information/Participant', and 'Actions' (with sub-options: 'Alert me', 'Export to spreadsheet', 'Modify settings and columns'). The right column contains a text block explaining the publication list and a table of publication types. The table has columns for 'Title', 'Publication type', and 'Full reference'. The data rows are: '+ Publication type : Electronic news (2)', '+ Publication type : Flyer (8)', '+ Publication type : Journal article peer reviewed (59)', '+ Publication type : Newsletter/Magazine (9)', '+ Publication type : Poster (110)', '+ Publication type : Presentation (108)', '+ Publication type : Press release (5)', and '+ Publication type : Website (4)'. At the bottom right, there is a green checkmark logo with the word 'CONFIDENCE' and a small icon of a person with a magnifying glass.

# Conclusions

---

- **8 e-Newsletters** have been sent to a broad public
- **3 Open Days** and **4 workshops** have been organised for the stakeholders
- **PhD Course** and **BSC education modules** have been organised for students and researchers
- Project outcomes were presented in **lectures (108)** and **posters (110)** at international conferences and as **publications (24)** in peer reviewed journals

# Scheduled Activities 2013

- **e-Newsletter:** Special issue  
Main outputs of the project Feb 2013

- **Publications:** Special issue in ABC journal  
CONffIDENCE outputs:  
4 reviews + 19 original papers

## Analytical and Bioanalytical Chemistry

Editors: S. Daunert; P. Garrigues; G. Gauglitz; K.G. Heumann; K. Jinno; A. Roda; A. Sanz-Medel; S.A. Wise

---

# Questions ?

# General overview, impact and future challenges

[www.confidence.eu](http://www.confidence.eu)

# Overview and impact

- ✓ Work packages are the core !
- ✓ Many useful results for different stakeholders:
  - European Commission, EU policies
  - European Food & Feed Industries (and associated laboratories)
  - EFSA
  - National governments (and associated laboratories)
  - EURL / NRL networks
  - CEN Committees for Food & Feed

# Some special achievements (1)

- ✓ Some multi-dipsticks are already commercially available

- Improvement of possibilities for quality control by food and feed industries
- Improvement of possibilities for official control
- Creation of jobs in Europe

# Some special achievements (2)

---

- ✓ Many tests have been validated through small-scale collaborative studies: transferability to other laboratories has been demonstrated
- ✓ Some tests have been validated through full collaborative studies, viz. mycotoxins dipstick, inorganic arsenic, perfluorinated compounds
  - Methods can be adopted by CEN for European standardization

# Some special achievements (3)

- ✓ Cross-cutting surveys, viz. fish & seafood: POPs, PFCs, heavy metals
  - Data will be available for EFSA
  - Improved exposure assessment
  - Contributions to risk-benefit (+ PUFAs)
- ✓ New topics have been included in the work programme in order to improve the relevance to EU policies (fruitful interaction with the Advisory Board!)
  - More pyrrolizidine and ergot alkaloids
  - Inorganic arsenic in rice
  - Full collaborative studies for mycotoxins and inorganic arsenic

# Future challenges (1)

---

- ✓ Conversion of CONfidence methods and new technologies into fully validated methods that can be implemented. The funding of *full scale interlab studies* on methods developed in FP7 projects should be given a priority by the Commission
- ✓ For *emerging contaminants* there needs to be a system developed for calls for 'method development, validation, training' for key analytes identified by the Commission

# Future challenges (2)

---

- ✓ Commercialization of rapid tests developed in CONfidence, e.g.
  - Some dipsticks
  - Kits that can be used for Luminex applications
- ✓ Development of models for risk based monitoring of contaminants in food & feed

# Future challenges (3)

---

Stakeholder views ?
